Investment objective

The Fund's investment objective is to achieve capital growth. This will be achieved by a proprietary and tested two-pillar process that identifies undervalued businesses through its fundamentally-driven bottom-up approach and partners with all portfolio companies to generate additional alpha from material ESG and operational improvements. This is reflected in a high conviction, concentrated core strategy with a long-term focus on harnessing the power of compounding cashflows and active ESG engagement.

The level of risk of this fund reflects mainly the risk of the Emerging Markets countries in which it is invested.

Historical data may not be a reliable indication for the future. Risk category shown is not guaranteed and may shift over time. The lowest category does not mean 'risk free'. Your investment does not benefit from any guarantee or protection. For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the share class.

Important risks materially relevant to the Sub-Fund which are not adequately captured by the indicator:

Emerging Markets risk : Some of the countries invested in may carry higher political, legal, economic and liquidity risks than investments in more developed countries.

Liquidity risk: in case of low trading volume on financial markets, any buy or sell trade on these markets may lead to important market variations/fluctuations that may impact your portfolio valuation.

Counterparty risk: represents the risk of default of a market participant to fulfil its contractual obligations vis-à-vis your portfolio.

Operational risk: this is the risk of default or error within the different service providers involved in managing and valuing your portfolio.

Currency risk : the Sub-Fund invests in securities that are issued in currencies other than the base currency of the shareclass. As a result the shareclass is subject to currency risk, which arises from changes in the exchange rates.

The occurrence of any of these risks may have an impact on the net asset value of your portfolio.

The SRRI represents the risk and return profile as presented in the Key Investor Information Document (KIID). The lowest category does not imply that there is no risk. The risk level of this sub-fund mainly reflects the market risk arising from investments in international equity markets including emerging markets equities.
